1. Your application's target audience

Any user that loves beer who is willing to explore beer options in other locations rather than their own. Suited for business travelers, for pleasure travel and even as an idea generator to select a trip destination. Aged over the allowed by country.

2. The problem your application solves

- It is an easy way to explore about beer options by locations over the world. Allowing the user to specifically search towards beer categories, styles as well as brands based on a selected location.
- For business/pleasure travelers sometimes can be difficult to find dinning options, this app helps the user suggesting nearby places by association of selected beers.
- In addition the app is intended to display the weather, and events information according to traveling dates and location.

3. The absolute minimum functionality you're working towards.

- a. User will be able to either:
 - Use their current location
 - Select a specific target location
 - Get a location (trip destination) based on a feeling lucky search result for beers.
- b. Explore beer options: categories, styles, brands.
- c. Be informed about the weather details.
- d. Be informed about dinning options nearby.
- e. Be informed about events nearby.
- f. Be informed about accommodation options nearby, to avoid driving.
